

Service Solutions

We have built relationships throughout the industry to ensure we can service the needs of our customers. Our diverse service offerings ensure we are your turnkey partner for all of your critical facility service needs.

INSTALL & STARTUP

A seamless install and startup are as important as the equipment themselves. Our team will install to manufacturers' recommendations, test the system, provide training to on-site team members, and perform any other tasks required by your organization for startup.

PREVENTATIVE MAINTENANCE

Just like your car needs an oil change, your critical facility equipment needs preventative maintenance performed. Our team will perform manufactures recommended maintenance on your equipment and check for critical issues to ensure you're operating at peak performance.

We can service any UPS or battery manufacturer.

SYSTEM REPLACEMENT & UPGRADES

Each system has a specific lifespan and our team understands what to look for to determine if your equipment is at end-of-life. We will walk you through the warning signs and help you get budget numbers for replacement, if necessary.

DESIGN ENGINEERING

Have a complicated project or application? Need some expert advice and guidance? Unsure of where to start? We're here as your project manager, support services, and design engineering team to help guide you through the project from start to finish.

SUPPORT SERVICES

We understand that alerts and alarms can happen at any hour. Our team is here 7 days, 24 hours a day, 365 days a year to be a resource for your team, no matter what problems you're facing with your critical facility.

*Contact our Engineering team to schedule service
for your facility.*
